Product overview

Acquire is Zonal's EPoS integrated purchase-to-pay inventory management solution, providing you and your team with a comprehensive, accurate, and real-time view of what's in stock, what's on order, and when orders are due for delivery. It helps reduce wastage associated with over-ordering, and helps you protect your margins by ensuring your stock is being purchased from the best supplier at the best price.

Supplier support

Suppliers can also be set up within Acquire to enable seamless purchasing processes, ensuring you're always ordering from the correct, pre-approved suppliers to maintain your margins.

Significant time savings

Save hours per week with automated invoice reconciliation, with any discrepancies noted and automatically passed into the system for review. Order templates can be configured for frequently created purchases, or standard item requirements.

Automated triggers

Set specific trigger quantities for individual products to ensure you don't run out of anything important.

Suggested ordering

Acquire comes as standard with advanced suggested ordering functionality, enabling the system to make suggestions on what products to order and in what quantities based on usage and par level settings.

Accurate, real-time data

EPoS integration enables real-time stock level updates as sales are processed and new stock is checked in, meaning you'll always have an accurate picture of how much inventory you have on hand.

Acquire gave us the ability to not have to log delivery notes and invoices for hours. It gave us an online ordering platform for everything in one place, which really, really helps."
